

## HERNING VVS A/S

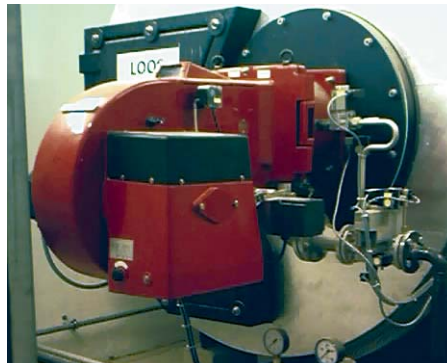

● Herning VVS blev etableret i 1992 og beskæftiger i dag 18 mand. Vi arbejder både inden for industri, traditionel VVS-arbejde og service.

Herning VVS arbejder meget med opbygning af specialanlæg for væsketilsætninger, som typisk bliver udført i rustfri stålør, der svejses sammen, ligesom vi udfører både nye anlæg og service på dampanlæg og er en af de første virksomheder, der har fået godkendt dampinstallation med 72 timers overvågning.

På industriområdet arbejder Herning VVS i hele Danmark, Norge, Sverige og Tyskland, men har også haft opgaver i Rusland, Saudi Arabien og Litauen. Vi har opbygget en stor know-how inden for industrivirksomhedens behov.

Vi sætter en stor ære i at overholde indgåede aftaler, og at arbejdet lever op til kundens forventninger om kvalitet og leveringstider.

● Herning VVS A/S is a firm of plumbers which was established in 1992 and now employs 18 men. The firm works for industry as well as carrying out traditional plumbing and service work.

One of Herning VVS's main activities is building special systems for admixing liquids which are usually constructed from stainless steel pipes which are welded together. The firm also builds and services steam plants and is one of the first companies to have a steam installation approved with 72-hour monitoring.

Herning VVS works for industrial customers throughout Denmark as well as in Norway, Sweden and Germany, but has also been involved in assignments in Russia, Saudi Arabia and Lithuania. The firm has built up an impressive level of know-how concerning the needs and requirements of industrial companies.

Herning VVS takes pride in fulfilling its contracts, and ensuring that the work fully meets customer expectations as regards quality and delivery times.
