

● Elforsyningen Nordvendsyssel – ENV

ENV er et forbrugerejet selskab, der forsyner godt 50.000 el-forbrugere i den nordlige del af Vendsyssel med strøm.

Selskabet blev i 2000 opdelt i ENV a.m.b.a., ENV Net A/S, og ENV Service A/S. 1. januar 2007 stiftede ENV a.m.b.a. desuden selskabet Energirådgiverne A/S. ENV er endvidere medejer af EnergiNord.

Driftssikkerhed er et afgørende nøgleord hos ENV, hvor forbrugerne og ejerne er i fokus. I 2006 lå ENV atter under landsgennemsnittet for registrerede fejl – en væsentlig del af de registrerede fejl skyldtes endda udefrakommende årsager.

ENV Net A/S tager sig af drift, vedligeholdelse og udbygning af el-nettet. Demolokalet Nordvendsyssel, der er en del af ENV Net, tilbyder kunderne husholdningsrådgivning og arrangerer forskellige temaarrangementer og skoleundervisning med fokus på energibesparelser.

ENV Service A/S udfører entreprenøropgaver på elforsyningsanlæg samt på gade- og vejbelysning. Desuden tilbyder ENV Service A/S en række serviceydelser for virksomheder og private, f. eks. termografering, kabelfejlfinding, ledningsregistrering og forbrugerafregning for energiselskaber.

Energirådgiverne A/S er et kompetencecenter inden for alle energiarter og tilbyder gratis energirådgivning til såvel erhverv, det offentlige som den private forbruger. Selskabet har indgået samarbejdsaftaler med seks energiselskaber i Nordjylland.

Som en moderne og professionel virksomhed har ENV naturligvis fokus rettet mod tidens og fremtidens forsyning. ENV har i en årrække arbejdet med fibernet i forbindelse med egen drift og overvågning. Fibernet har stor ledig kapacitet, som ENV gerne vil udnytte kommercielt og således medvirke til udvikling af den digitale infrastruktur i Vendsyssel.

● Elforsyningen Nordvendsyssel – ENV

ENV is a consumer-owned utility company which supplies more than 50,000 customers in northern Vendsyssel with power.

In 2000, the company was split up into ENV a.m.b.a., ENV Net A/S, and ENV Service A/S. On January 1. 2007, ENV a.m.b.a. also established the energy consulting company Energirådgiverne A/S. ENV is also a co-owner of EnergiNord.

Reliability of operations is of paramount importance at ENV, where focus is on consumers, its owners. In 2006, ENV was below the national average for registered errors – of which a significant number could be ascribed to causes beyond our control.

ENV Net A/S is responsible for the operation, maintenance and development of the electricity grid. The demonstration facility Demolokalet Nordvendsyssel, which is part of ENV Net, provides advice to customers and organises various theme events and lessons for schoolchildren which all focus on energy conservation.

ENV Service A/S carries out work on electrical supply installations as well as road and street lighting. Moreover, ENV Service A/S provides a range of services to private and business customers, e.g. thermography, cable fault finding, cable registration and the handling of customer accounts for energy companies.

Energirådgiverne A/S is a competence centre specialising in all energy types which offers free energy consultancy to the business sector, the public authorities and private consumers. The company has signed collaboration agreements with six energy companies in northern Jutland.

As a modern and professional company, ENV naturally focuses on current and future energy supplies. For several years, the company has worked with fibre-optic networks in connection with its own operations and monitoring. The fibre-optic network has considerable surplus capacity which ENV would like to utilise commercially, and in so doing contribute to developing the digital infrastructure in Vendsyssel.
